

# New interfaces: USB and WiFi

**HELMAC**  
weighing food machines • retail data systems

We now have two new interfaces available, to make the networking of Helmac scales easier, creating networks in a quick and more efficient way.

## Ethernet and USB interface

It allows the connection of Helmac scales to a PC using an Ethernet cable. By means of the USB Port installed in the scale it is possible to use any USB key to perform the following operations:

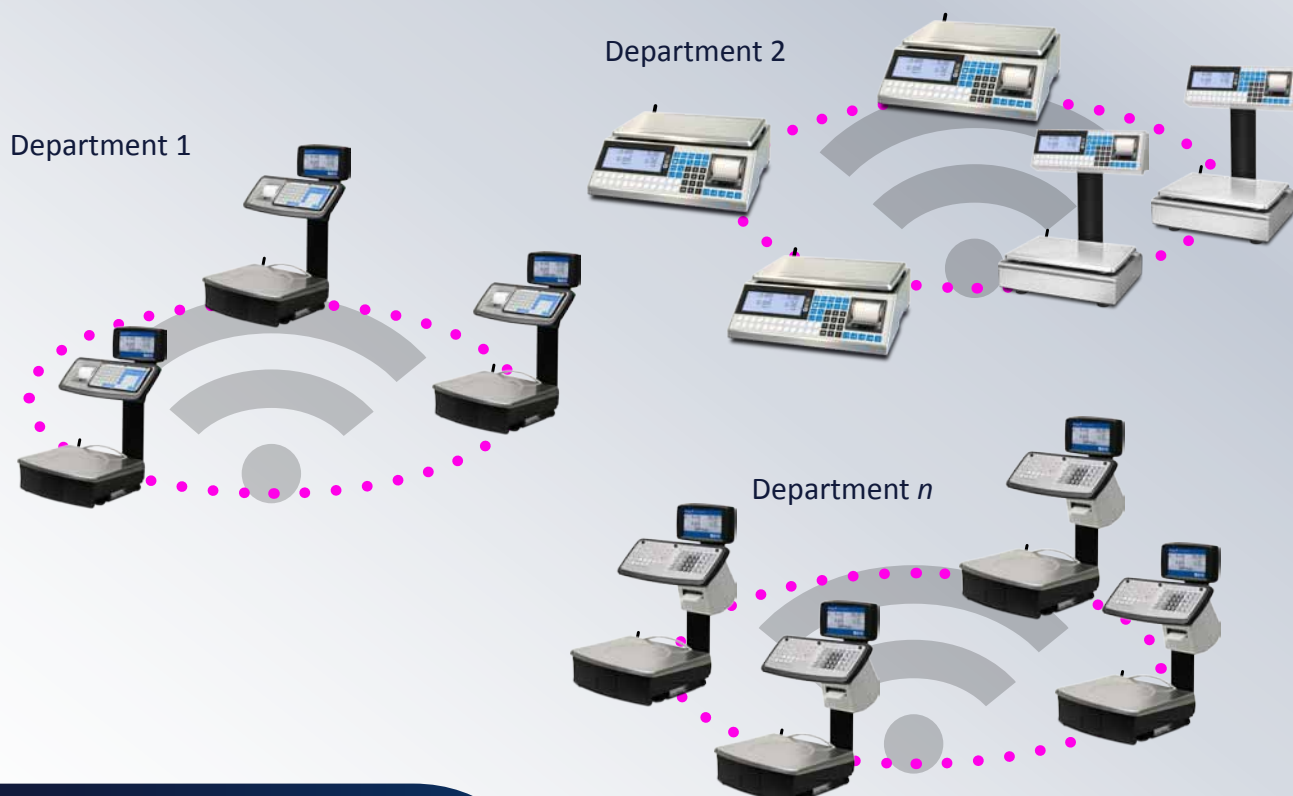

- save the tickets in CSV format (as used in the HTR Software)
- backup operations
- save the scale configuration and the working mode
- update the instrument firmware.

## WiFi interface

It allows the connection between Helmac scales without cables, ensuring an easier installation and a greater network stability, thanks to its interference immunity.

By using the WiFi communication, it is possible to connect together up to 5 scales in a network "ad hoc"; the number of the connected scales can be increased up to 16 by using an access point.
